DETAILED ACTION

Allowable Subject Matter

1. Claims 1-49 are allowed.
2. The following is an examiner's statement of reasons for allowance:

In the claimed methods for tracking ectopic beats or deriving non-synchronous subcomponents in a heartbeat signal, permitting a user to mark a begin point and an end point of a captured first or a reference ECG signal, or a selected synchronous subcomponent, is not shown nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Xue et al '038 teach cross correlating P-waves with a template in analysing P-waves from an ECG signal; however, there lacks a teaching or suggestion to derive the P-wave from a premature atrial contraction beat. Further, the reference template of Xue et al is not defined as being a waveform segment between marked end points of the ECG signal but rather the template is formed by averaging P-waves which meet a matching criteria.

DuFault et al '114 teach selecting an initial QRS complex from an ECG signal to create a template. The ECG data is morphologically matched to the template rather than compared by a

Art Unit: 3762

correlation coefficient calculation to form a best fit with the template. Further, there lacks a teaching or suggestion to derive a P-wave from a premature atrial contraction.

Lo et al '350 teach template matching or cross-correlating may be used to find an EKG signal.

Deans et al '959 teach using peak detection to identify a QRS complex signal in a composite ECG signal and then comparing it against a template by calculating a statistical correlation coefficient.
